SUMMARY

Highly skilled Frontend Developer with over three years of experience specializing in React.js and one year of backend experience with Laravel. Demonstrated expertise in building dynamic and responsive web applications, focusing on user experience and performance optimization. Proficient in creating clean, maintainable code and integrating frontend features with backend services. Adept at collaborating with cross-functional teams to deliver high-quality software solutions in agile environments. Passionate about staying up-to-date with the latest technologies and best practices in web development.

WORK EXPERIENCE

Front-End Developer

AlPagino VietNam   06/2021 - 7/2024

- Designed and implemented responsive user interfaces using React.js, adhering to best practices and modern design principles.
- Developed reusable and modular components, ensuring consistency and maintainability across the application.
- Successfully improved the user experience by implementing responsive design and optimizing UI components for different devices and browsers.
- Managed application state using Redux Toolkit or Recoil, facilitating efficient data flow and state synchronization.
- Integrated frontend with backend services via RESTful APIs, handling data fetching, caching, and error handling.
- Worked closely with UI/UX designers to create visually appealing and user-friendly interfaces, focusing on accessibility and usability.
- Managed code versions and collaborated with team members using Git and platforms like SourceTree.
- Achieved a significant reduction in page load times by implementing performance optimization strategies, resulting in faster user interactions.

Back-End Developer

MiraiHuman   12/2019 - 04/2021

- Developed and maintained server-side logic using Laravel framework, ensuring the smooth functioning of web applications.
- Created and integrated RESTful APIs to facilitate seamless communication between frontend and backend systems.
- Designed and managed relational databases using MySQL, including schema design, migrations, and query optimization.
- Implemented security measures, such as data encryption and authentication, to protect sensitive user information.

PROJECT

MiraiHuman

Project: Internal Management Software

- **Technologies used**: PHP, Laravel, MySQL
- **Description**: Developed a web application to manage students enrolled in the company's training programs. The system tracks immigration status updates and calculates expenses that students are required to pay.
- **Role**: Designed the user interface, system architecture, and developed logic for processing forms and handling data.

Alpagino VietNam

Project: Web Application

- **Technologies used**: React.js, Material UI
- **Description**: Developed a web application to streamline the process of managing print materials for theater performances. The interface allows users to edit information, export high-quality PDFs for printing, and manage users along with their permissions,...
- **Role**: Developed features for drag-and-drop image functionality, image preview, and image sorting,..
